

REVERSE THE BITS IN AN INTEGER

# REVERSE THE BITS IN AN INTEGER

GET THE BITS ONE AT A TIME FROM  
THE RIGHT MOST END

SHIFT THE BIT EXTRACTED FROM THE  
ORIGINAL NUMBER INTO THE RESULT  
FROM THE RIGHT

SHIFT THE ORIGINAL NUMBER  
RIGHT TO EXTRACT THE NEW  
RIGHT MOST BIT

SHIFT THE RESULT NUMBER LEFT TO  
MAKE ROOM TO GET THE NEW  
RIGHTMOST BIT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

RESULT

EXTRACT THE RIGHT MOST BIT AND ADD  
IT TO THE RIGHT MOST POSITION OF THE  
RESULT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

SHIFT RIGHT

RESULT

SHIFT LEFT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

RESULT

ONCE MORE EXTRACT THE RIGHT MOST  
BIT AND ADD IT TO THE RIGHT MOST  
POSITION OF THE RESULT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

SHIFT RIGHT

RESULT

SHIFT LEFT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

RESULT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

SHIFT RIGHT

RESULT

SHIFT LEFT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

RESULT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

RESULT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

RESULT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

RESULT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

RESULT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

RESULT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

RESULT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

RESULT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

RESULT

# REVERSE THE BITS IN AN INTEGER

ORIGINAL NUMBER

1	0	0	0	1	1	1	1
---	---	---	---	---	---	---	---

RESULT

1	1	1	1	0	0	0	1
---	---	---	---	---	---	---	---

DONE! RESULT HOLDS ALL THE  
BITS IN THE REVERSE ORDER!

# REVERSE THE BITS IN AN INTEGER

```
int reverse_bits(int num) {  
    int reverse_num = 0;  
    unsigned int count = sizeof(int) * 8 - 1;  
  
    while (num != 0) {  
        int last_bit = num & 1;  
        reverse_num = reverse_num | last_bit;  
        reverse_num = reverse_num << 1;  
        num = num >> 1;  
        count--;  
    }  
  
    reverse_num = reverse_num << count;  
  
    return reverse_num;  
}
```

INITIALIZE THE RESULT

COUNTER TO TRACK THE NUMBER OF BITS IN THE INTEGER - THIS ALLOWS US TO SHORT CIRCUIT OUT OF THE REVERSAL

EXTRACT THE RIGHT MOST BIT

ADD IT TO THE RIGHTMOST BIT OF THE RESULT

SHIFT THE RESULT LEFT

SHIFT THE ORIGINAL NUMBER RIGHT

IF THE ORIGINAL NUMBER HAS ONLY ZEROES SHIFT LEFT THE REMAINING BITS
